

Keystone Precision & Engineering, Inc. announces its third consecutive year of growth, new capabilities, and increased capacity

Keystone Precision & Engineering, Inc. (KPE), northern Massachusetts' leader in precision machined components today announced that the company has done well during the most recent economic down turn, with increased sales, new customers, and improved process and measurement capabilities.

KPE increased its capability in machining by successfully executing a number of projects that required machining of super alloys and final mechanical assembly. KPE's process development team has developed the required knowledge to ensure excellent process capability to design requirements and predictability against budgets. KPE now has a dedicated assembly and cleanroom space for customer's assembly requirements. KPE has also integrated its CCM measurement capability into its quality system and work flow, allowing for more precise set-up and product realization. We have also increased our CNC milling and CNC lathe capacity by 20% in the last year.

KPE services industries that require the utmost attention to extreme mechanical tolerances and quality. While adding these new capabilities, we still specialize in small to medium volume precision machining, including prototype and product realization assistance. With these operational and business improvements, Keystone continues to build a foundation for controlled growth in the years to come.

About Keystone Precision & Engineering, Inc.

Keystone Precision & Engineering, Inc. is a privately held full service precision machine shop that provides a wide range of cost-effective components to the Non-Invasive Medical Devices, Microwave and Communication, Contract Manufacturing, Vacuum and Semiconductor Equipment, Electronic and Consumer Products, Optical Components Manufacturers, and Motion Control industries. Founded over 25 years ago on a reputation of attention to detail and quality in the most difficult of customer applications, Keystone is moving forward to expand its presence in existing markets and to penetrate into new markets and industries. Keystone was purchased in February 2007 by the management team of Ainsworth, Stanieich, and Serino. The company is located in Pepperell, Massachusetts, USA.
